What this standard covers

This standard specifies the method for determining the boron content in nickel-based alloy powder by acid-base titration. This standard is applicable to the determination of boron content in nickel-based alloy powder, with a determination range of 1.00% to 20.00%.

Document data

International classification (ICS): 77.16.

Chinese classification (CCS): H16.

Estimated length of the Chinese original: 10,176 words.

Supersedes the earlier edition YS/T 539.1-2009.
