## Foreword

This document is in accordance with the provisions of GB/T 1.1-2020 "Guidelines for standardization work Part 1: Structure and drafting rules for standardization documents" Drafting.

This document is Part 11 of GB/T 46122 "Test Methods for Specific Chemical Substances in Fireworks and Firecrackers". GB/T 46122 has been published.

The following sections.

--- Part 1: General provisions;

--- Part 2: Determination of hexachlorobenzene content - Gas chromatography method;

--- Part 3: Determination of lead and lead compound content - Flame atomic absorption spectrometry;

--- Part 4: Determination of lead and lead compounds content - X-ray fluorescence spectrometry;

--- Part 5: Determination of lead and lead compounds content - Inductively coupled plasma atomic emission spectrometry;

Preview: page 2 of 5 shown, 8 in the full document. Complete English PDF, instant download:
https://chinastandards.org/standards/gb-t-46122-11-2025

--- Part 6: Determination of zirconium content of particles less than 40 μm - Inductively coupled plasma atomic emission spectrometry;

--- Part 7: Determination of chlorate content - Chemical titration method;

--- Part 8: Determination of arsenic content - Hydride generation-atomic fluorescence spectrometry;

--- Part 9: Determination of mercury content - Hydride generation-atomic fluorescence spectrometry;

--- Part 10: Determination of nitrogen content in nitrocellulose - Ferrous sulfate titration method;

--- Part 11: Determination of phosphorus content - Inductively coupled plasma atomic emission spectrometry;

--- Part 12: Determination of picric acid and picric acid salts content - High performance liquid chromatography method.

This document is equivalent to ISO 22863-11:2022 "Fireworks and firecrackers specific chemical substances detection method Part 11: Inductive coupling etc.

Determination of phosphorus content by plasma atomic emission spectrometry.

The following minimal editorial changes have been made to this document.

--- To coordinate with the existing standard, the name of the standard will be changed to "Test Methods for Specific Chemical Substances in Fireworks and Firecrackers Part 11: Phosphorus Content" Determination of alpha-HgCl2 by Inductively Coupled Plasma Atomic Emission Spectrometry.

## Introduction

As the importance of fireworks and firecrackers product safety and environmental protection gradually deepens, the chemical substances used in fireworks and firecrackers products are Requirements are made, especially for the use of toxic and harmful chemicals and those that increase the risk of combustion and explosion of products. International Standardization the Fireworks and Firecrackers Technical Committee organized the development of ISO 22863 (all parts). GB/T 46122 adopts ISO 22863 (all parts).

The standardization of the testing methods for fireworks and firecrackers is to improve the safety and environmental performance of fireworks and firecrackers products and promote the development of the industry.

GB/T 46122 is planned to consist of 12 parts.

--- Part 1: General. The purpose is to determine the methods of specimen dissection, sampling and sample preparation.

--- Part 2: Determination of hexachlorobenzene content by gas chromatography. The purpose is to determine the content of hexachlorobenzene in fireworks and firecrackers.

Methods, procedures and presentation of results.

--- Part 3: Determination of lead and lead compounds content Flame atomic absorption spectrometry.

Method, procedure and presentation of results for the determination of lead and lead compounds in fireworks and firecrackers by absorption spectroscopy.

--- Part 4: Determination of lead and lead compounds content X-ray fluorescence spectrometry. The purpose is to determine the use of X-ray fluorescence Method, procedure and result presentation of the determination of lead and lead compounds in fireworks and firecrackers by spectroscopy.

--- Part 5: Determination of lead and lead compounds content Inductively coupled plasma atomic emission spectrometry. The purpose is to determine the Method, procedure and results for determination of lead and lead compounds in fireworks and firecrackers by inductively coupled plasma atomic emission spectrometry Results statement.

--- Part 6: Determination of zirconium content in particles less than 40 μm by inductively coupled plasma atomic emission spectrometry.

Method for determining zirconium content in fireworks and firecrackers with particle size less than 40 μm by inductively coupled plasma atomic emission spectrometry, Procedure and result presentation.

--- Part 7: Determination of chlorate content Chemical titration analysis method. The purpose is to determine the use of chemical titration analysis method for fireworks Method, procedure and presentation of results for the determination of chlorate content in firecrackers.

--- Part 8: Determination of arsenic content by hydride generation-atomic fluorescence spectrometry.

Method, procedure and result presentation of determination of arsenic content in fireworks and firecrackers by electron fluorescence spectrometry.

--- Part 9: Determination of mercury content by hydride generation-atomic fluorescence spectrometry.

Method, procedure and result presentation of determination of mercury content in fireworks and firecrackers by electron fluorescence spectrometry.

--- Part 10: Determination of nitrogen content in nitrocellulose by ferrous sulfate titration. The purpose is to determine the the method, procedure and result expression of the determination of nitrogen content in nitrocellulose in fireworks and firecrackers are given in

this paper.

--- Part 11: Determination of phosphorus content by inductively coupled plasma atomic emission spectrometry.

Method, procedure and presentation of results for determination of phosphorus content in fireworks and firecrackers by plasma atomic emission spectrometry.

--- Part 12: Determination of picric acid and picrates by high performance liquid chromatography.

Method, procedure and result presentation for the determination of picric acid and picrates in fireworks and firecrackers by spectroscopy.

Detection methods for specific chemical substances in fireworks and firecrackers Part 11: Determination of phosphorus content - Inductive coupling Inductively coupled plasma atomic emission spectrometry (ICP-OES)

## 1 Scope

This document describes a method for the determination of phosphorus content in pyrotechnic compositions by inductively coupled plasma atomic emission spectrometry (ICP-OES).

This document applies to the determination of phosphorus content in pyrotechnic powder of fireworks and firecrackers (except friction products).

## 2 Normative references

The contents of the following documents constitute the essential clauses of this document through normative references in this document.

For referenced documents without a date, only the version corresponding to that date applies to this document; for referenced documents without a date, the latest version (including all amendments) applies to this document.
