What this standard covers

This standard specifies the basic requirements, planning layout and general arrangement, design requirements, construction quality management, commissioning, operation management, maintenance management, and emergency response requirements for aboveground flammable liquid atmospheric pressure storage tank areas. This standard applies to the safety management of newly built, expanded, or renovated flammable liquid atmospheric pressure storage tank areas and existing flammable liquid atmospheric pressure storage tank areas within chemical enterprises (including petrochemical, coal chemical, and fine chemical plants).

Document data

International classification (ICS): 13.100.

Chinese classification (CCS): G09.

Estimated length of the Chinese original: 28,233 words.
