What this standard covers

This standard specifies the classification of electrostatically sensitive areas in fireworks and firecracker enterprises, as well as the basic methods, technical measures, and management measures for preventing electrostatic hazards. It describes the methods for determining the resistance values ??of indirect electrostatic grounding and conductive tools, and specifies the methods for laying self-leveling floors (platforms). It also provides a series of electrostatic polarity sequences to facilitate the selection of materials with similar polarities. This standard applies to the prevention of electrostatic hazards in the production and storage areas of fireworks and firecracker enterprises.

Document data

International classification (ICS): 13.100.

Chinese classification (CCS): C68.

Estimated length of the Chinese original: 13,180 words.

Supersedes the earlier edition AQ 4115-2011.
