What this standard covers

This standard specifies the unit product energy consumption level, technical requirements, and statistical range for lithium-ion battery cathode materials, and describes the calculation method. This standard applies to the calculation and assessment of energy consumption for lithium-ion battery cathode material manufacturers such as lithium manganese oxide, lithium cobalt oxide, lithium iron phosphate, and ternary materials, as well as energy consumption management for new and expanded projects.

Document data

International classification (ICS): 13.100.

Chinese classification (CCS): C65.

Estimated length of the Chinese original: 12,173 words.
