What this standard covers

This standard specifies the methods and requirements for quantifying the carbon footprint of zinc ingot products, including the purpose of quantification, scope of quantification, inventory analysis, impact assessment, interpretation of results, reporting, and declarations. This standard applies to the quantification of the carbon footprint of zinc ingot products produced from zinc ore or zinc secondary materials, as well as zinc alloy ingot products smelted and processed similarly to zinc ingots. This standard also applies to the quantification of the carbon footprint of preceding products of zinc ingots (zinc alloy ingots). Common preceding products include: zinc ore, zinc concentrate, mixed lead-zinc concentrate, zinc concentrate roasted sand, zinc oxide enrichment for zinc smelting, and crude zinc.

Document data

International classification (ICS): 77.120.01.

Chinese classification (CCS): H09.

Estimated length of the Chinese original: 11,126 words.
