Foreword

This standard was drafted in accordance with the rules given in GB/T 1.1-2009.

This standard replaces CJ/T 166-2006 "construction business integrated circuit (IC) card application technology" this standard compared with CJ/T 166-2006, the revised main contents include.

- Increase and improve the card type (see 5.1);
- Increase and improve the requirements of the open platform CPU card (see 5.6);
- Increase and improve the IC card interoperability requirements (see 5.7);
- Increase and improve the physical parameters of the PSAM card requirements (see 6.2.1.3);
- Increase and improve the security requirements of the city card security area (see 11.7);
- Increase and improve the requirements of multi-application open platform (see Chapter 13);
- Delete the contents of the logical encryption card (see 2006 version 3.2.4, 5.5.1, 5.8.3, 6.7.1, 7.2.3.4.2, 7.5.1);
- Deletion of the service ISAM card related content (see 2006 version 6.4.2).

This standard proposed by the Ministry of Housing and Urban Standard and Design Institute.

This standard by the Ministry of Housing and Urban Information Technology Standardization Technical Committee centralized.

1 Scope

This standard specifies the construction of integrated circuit (IC) card card technology requirements, off-line IC card terminal equipment, online IC card terminal set Prepared, table-type IC card terminal equipment, key systems and requirements, digital certificate authentication system, security mechanisms and security requirements, IC card application system Technical requirements, multi-application open platform requirements, IC card application system acceptance requirements and the corresponding definitions, symbols and so on.

This standard applies to the construction of IC card applications related to cards, terminal equipment, and application systems development, integration, maintenance and management.
