1 Foreword

DB/T 39-2010 was issued by China Earthquake Administration on 12 March 2010 and has been in force since 1 June 2010.

The DB/T prefix marks a recommended standard. It is not law in itself: it becomes binding when a contract names it, when a regulation or a mandatory standard refers to it, or when a producer declares conformity with it.

The document runs to 11 pages in English translation.

2 Scope Preview

This standard specifies the classification of gravity observation network, observation items, functions, layout principles, technical indicators and technical equipment design requirements. This standard is applicable to the design of various gravity observation networks in seismic network and also to the design of gravity observation network and special gravity observation network for earth science research.

DB/T 39-2010 is filed under Chinese Standard Classification P 15, in the field of engineering construction.

This catalogue holds 33 other DB/T standards without an ICS number.

In this catalogue, DB/T standards carry edition years from 2000 to 2026.

3 About this standard

Issued by: China Earthquake Administration

English translation: about 11 pages

Chinese original: about 16,190 characters

4 Related standards

Standards on related subjects:

GB/T 17742-2020 - The Chinese seismic intensity scale

DB/T 59-2015 - Technical requirements for seismic observation instruments joining the network - Seismic intensity meter

DB/T 32.1-2020 - Technical requirements of instruments in network for earthquake monitoring. Underground fluid observation instruments - Part 1: Pressure instrument for water level

DB/T 37-2010 - Technical specifications for design of earthquake monitoring network. Geomagnetic observation network

DB/T 36-2010 - Technical specifications for design of earthquake monitoring network. Geoelectric observation network

5 Classification and status

Chinese Standard Classification (CCS): P 15

Prefix DB/T: recommended standard.
