CCS F 21

DL

**INDUSTRY STANDARD OF THE
PEOPLE'S REPUBLIC OF CHINA**

DL/T 1080.3-2010

**Application integration at electric utilities. System interfaces
for distribution management. Part 3: Interface for network
operations**

电力企业应用集成 配电管理的系统接口 第3部分：电网运行接口
(English Translation)

Issued on: May 24, 2010

Implemented on: October 1, 2010

Issued by: National Energy Administration

What this standard covers

This standard specifies the interface system for the distribution management system main components of the interface. DL/T 1080. 1 clear and established a standard interface-based reference model interface requirements, DL/T 1080. 3 ~ 1080. 10 specifies the reference model describes each of the major business functions associated interface. In DL 1080 standard, Electricity distribution network system management with DMS various distributed application components. Functions of these components, including transmission equipment monitoring and control to ensure the reliability of the system management process, voltage management, demand side management, outage management, work management, automated mapping and facilities management. DL 1080 standard, Electricity distribution network system management with DMS various distributed application components. Functions of these components, including transmission equipment monitoring and control to ensure the reliability of the system management process, voltage management, demand side management, outage management, work management, automated mapping and facilities management. DL 1080 is limited to the standard interface definition, has nothing to do with the implementation. It provides a different computer systems, platforms, and voice interoperability between. Meet the interface requirements of the implementation methods and techniques do not belong to the scope of this standard, this standard only requires the interface itself. This standard specifies the message type collection of information content, message types can be used to support many of grid operation related business functions. Defined in this standard message types Typical applications include external data acquisition systems, fault isolation, fault recovery, things to help management, equipment maintenance and operation and so on.

Document data

International classification (ICS): 29.240.01.

Chinese classification (CCS): F21.

Estimated length of the Chinese original: 29,297 words.

Adopted international standard: IEC 61968-3-2003, IDT.
