What this standard covers

This standard specifies the thermal power unit coordination and optimization of the steam temperature control system acceptance and testing methods. This standard is applicable to the coordination of the individual optimization control system and the product configuration and technical application of the steam temperature optimization control system which is used in combination with the conventional control system of the thermal power unit. Other types of non-individual configuration of the optimal control system can refer to the implementation.

Document data

International classification (ICS): 27.100.

Chinese classification (CCS): F24.

Estimated length of the Chinese original: 14,143 words.
