What this standard covers

This standard specifies the general principles, methods and steps to reduce the power frequency grounding impedance in power engineering. This standard applies to power generation (including wind power, solar energy and energy storage, etc.), transmission, substation, distribution and electricity and other power grounding engineering design and construction of resistance reduction.

Document data

International classification (ICS): 29.240.

Chinese classification (CCS): P62.

Estimated length of the Chinese original: 14,165 words.
