What this standard covers

This standard specifies the specific requirements and regulations for the mathematical model construction, parameter measurement, and typical model of the turbine governing system. This standard is applicable to the identification, simulation and verification methods of the turbine governing system (including the pump turbine regulating system), and the modeling and parameter measurement of the turbine adjustment.

Document data

International classification (ICS): 27.100.

Chinese classification (CCS): K51.

Estimated length of the Chinese original: 33,348 words.
