What this standard covers

This standard specifies the main technical parameters, indicators and testing methods for the integrated purification of carbon-based materials, and the selection principles and methods for carbon-based materials. This standard is applicable to thermal power plants using flue gas purification technology using carbon-based materials as medium. Other flue gas purification processes using carbon-based materials as media can be used as reference.

Document data

International classification (ICS): 27.100.

Chinese classification (CCS): F29.

Estimated length of the Chinese original: 24,266 words.
