What this standard covers

This standard specifies the technical requirements that electronic labels should meet in the production field of the power industry, including label types and specifications, physical characteristics, electrical characteristics, data formats, and communication performance requirements. This standard applies to electronic tags and read-write terminals used in all aspects of power production (including power generation, transmission, transformation, distribution, etc.), and other applications (metering, relay protection, scheduling, etc.) can also be used as a reference.

Document data

International classification (ICS): 29.020.

Chinese classification (CCS): K04.

Estimated length of the Chinese original: 15,169 words.
