What this standard covers

This standard specifies the method for locating and measuring noise sources using multi-channel microphone arrays for transmission lines, substations and converter stations (hereinafter referred to as substations). See Appendix A for the basic principles of microphone array noise extraction. This standard can be used for noise measurement of high-voltage transmission lines and transmission lines in substations and electrical equipment.

Document data

International classification (ICS): 17.140.

Chinese classification (CCS): Z32.

Estimated length of the Chinese original: 19,117 words.
