What this standard covers

This standard specifies the marking, technical requirements, testing and test methods, inspection and marking, packaging, transportation, storage and quality certificates of graphite-based flexible grounding bodies. This standard applies to the graphite-based flexible grounding body used for the grounding of transmission line towers. The lightning protection and grounding of structures in the distribution network, independent lightning rod, communication, petrochemical, railway, construction and other industries can be used for reference.

Document data

International classification (ICS): 27.100.

Chinese classification (CCS): F21.

Estimated length of the Chinese original: 15,196 words.
