What this standard covers

This standard specifies the generator connected to the grid design principles and major equipment meet the technical requirements of key parameters. This standard applies to 220kV and above capacity electrical system and new pots in 100MW turbine generator and above, 50MW hydro equipment and above parameters are chosen. And above 100MW gas-fired generators and pumped storage units available for implementation.

Document data

International classification (ICS): 29.160.20.

Chinese classification (CCS): K21.

Estimated length of the Chinese original: 14,175 words.
