What this standard covers

This standard specifies the voltage level of the standard encoding method and its corresponding code, including standard DC standard voltage and frequency of 50Hz AC standard voltage than the encoding method and code. This standard applies to electricity generation, transmission, distribution, power system electrical equipment each pregnancy management and information processing and exchange of information. This standard does not apply to the signal, the signal transmission property values ??of the voltage and side pots, does not apply to electrical components inside the device, components or equipment parts standard voltage.

Document data

International classification (ICS): 29.020.

Chinese classification (CCS): K04.

Estimated length of the Chinese original: 7,730 words.
