What this standard covers

This standard specifies the vacuum insulating oil pressure method gas content measurement methods. This standard applies to oil-filled electrical equipment insulating oil and gas content measurement for kinematic viscosity (40degCC) is not greater than 40mm²/s of other oil -containing gas may be determined with reference to the standards. This standard is divided into A method (electronic vacuum gauge method) and Method B (U-shaped differential manometer oil column method).

Document data

International classification (ICS): 27.100.

Chinese classification (CCS): E38.

Estimated length of the Chinese original: 9,939 words.

Supersedes the earlier edition DL 423-1991.
