What this standard covers

This standard specifies the hydrology logging work (hereinafter referred to as logging) design, equipment, wellsite construction, data compilation and processing of the raw data quality assessment, the results of submission, as well as the basic requirements such as security and protection aspects. This standard applies to the hydrological and geological exploration of geothermal logging work. Mineral resources, engineering and environmental geology exploration may also be related to logging implementation.

Document data

International classification (ICS): 7.06.

Chinese classification (CCS): D14.

Estimated length of the Chinese original: 17,167 words.
