What this standard covers

This standard specifies the electrical conductivity logging class main technical requirements, test methods, inspection rules, packaging, labeling, transportation and storage of electrical geophysical logging in use. This standard is a product of such electrical logging tool design, production, use, and acceptance and to develop appropriate standards for specific models based on a common technology. This standard applies to coal, metal and non-metallic minerals, hydrogeology and engineering geology dedicated, modular and integrated style of a variety of analog and digital electrical conduction type logging tool, systems and downhole instrument (probe). NA petroleum geophysical logging equipment.

Document data

International classification (ICS): 17.06.

Chinese classification (CCS): A44.

Estimated length of the Chinese original: 11,139 words.
