What this standard covers

This standard specifies the detection and evaluation methods for the physical properties of fabrics that cause contact sensations during fabric contact with the skin using the multi-indicator integration method. This standard applies to textile fabrics with uniform and regular surface texture, and non-uniform regular fabrics such as jacquard, lace, hollowed out and other fabrics for reference.

Document data

International classification (ICS): 59.080.30.

Chinese classification (CCS): W04.

Estimated length of the Chinese original: 22,232 words.
