What this standard covers

This standard specifies a method for measuring four physical properties related to touch, including fullness, stiffness, roughness, and tightness of fabrics using the three-point beam method, and provides evaluation indicators. This standard is applicable to fabrics with smooth surface and uniform structure. Non-uniform regular fabrics such as jacquard, lace, hollow and other fabrics shall be followed accordingly. This standard does not apply to fabrics and their products that are severely curled or have a thickness exceeding 4mm.

Document data

International classification (ICS): 59.080.30.

Chinese classification (CCS): W04.
