What this standard covers

This standard specifies the test principles, instruments and equipment, sample preparation, test procedures, result calculation, etc. for measuring fiber combustion performance using the smoke density method. This standard is only used to test the burning performance of fibers under these test conditions, control product quality, or study the factors that cause certain fibers to catch fire. It is not used to evaluate the fire risk in their actual use.

Document data

International classification (ICS): 59.060.20.

Chinese classification (CCS): W50.

Estimated length of the Chinese original: 14,154 words.
