What this standard covers

This standard specifies the test method for measuring the dimensional change rate, peeling strength change rate and evaluating the change in appearance of fusible lining garments after they have been dry-cleaned in a commercial dry cleaning machine. This standard is applicable to the dry cleaning resistance test of various types of dry cleanable garments using adhesive linings. It is also suitable for testing the dry cleaning resistance of garment fabrics and adhesive linings, combined samples or small samples.

Document data

International classification (ICS): 61.020.

Chinese classification (CCS): Y75.
