What this standard covers

This standard specifies the data format for converting marking data from one CAD marking system to another CAD marking system or CAM system. This standard is suitable for limiting data differences between different CAD systems when processing the same version. This standard does not apply to curve interpolation or description. All curves are represented by discrete vectors and depend on the resolution of the CAD software. This standard is not suitable for expressing the dimensional relationship between patterns or between pattern sizes, nor is it suitable for expressing the correspondence between the geometric figures of 2D or 3D sewing product samples.

Document data

International classification (ICS): 61.020.

Chinese classification (CCS): Y75.

Estimated length of the Chinese original: 33,336 words.
