3 Exchange data file naming rules

The exchange data file name consists of three categories. service category, packet type, and packet number. Each component is connected by a "-".

The file suffix is ".XML" and the structure is as follows.

SFZ_xxxx_XXXXXXXXXXXXXXXXXXXXXXX . XML business type Packet type Packet number

- a) Service Type. Describe that the exchange data file belongs to the resident identity card management service and is represented by "SFZ".
- b) Packet type. 4 characters, as specified in Chapter 5 of this part.
- c) Packet number. 25 characters, using the encoding method specified in GA 214.11.

4 Exchange data file structure

The information on the production of resident ID cards is exchanged by means of data files. The exchange data file is in the XML standard format, by the declaration part and
