Table B:5 Description of the interface for obtaining network certificate password data	

Table C:1 IdCardData structure definition

Table C:2 Result (NSDictionary) structure definition

Table C:3 Description of interface for obtaining control version number

Table C:4 Description of the interface for obtaining identity verification data

Table C:5 Description of interface for obtaining network certificate password data

Foreword

GA/T 1723 "Resident Identity Network Authentication Service" is divided into 5 parts:

- Part 1: Certification classification;
- Part 2: Service interface requirements;
- Part 3: Information acquisition control interface requirements;
- Part 4: Technical requirements for face image acquisition controls;
- Part 5: Face comparison engine interface requirements:

This part is part 3 of GA/T 1723:

This section was drafted in accordance with the rules given in GB/T 1.1-2009:

Please note that certain contents of this document may involve patents: The issuing agency of this document is not responsible for identifying these patents:

This part was proposed and managed by the Technical Committee for the Standardization of Social and Public Security Applications of the Ministry of Public Security:

Drafting organizations of this section: The First Research Institute of the Ministry of Public Security, Beijing Zhongdun Anxin Technology Development Co., Ltd., Beijing Zhongdun Security Technology Development Corporation Company, Xingtang Communication Technology Co., Ltd., Zhejiang Ant Small and Micro Financial Service Group Co., Ltd., Newland (Fujian) Public Service Co., Ltd., Guangzhou State Dabai Internet Technology Co., Ltd., Shenzhen Tencent Computer System Co., Ltd., the Ministry of Public Security and police electronic products quality inspection Xin, Beijing Yingxin Information Technology Co., Ltd:

Introduction

Resident identity network authentication is one of the important links in the national implementation of the network credible identity strategy: Due to the virtual nature of the Internet Point, the traditional identity authentication method can no longer meet the needs of network user applications, and network identity authentication has a variety of

authentication methods, Identity information is difficult to distinguish between true and false and other disadvantages, and it has caused new security issues such as data leakage, identity fraud, and privacy dissemination, and even threatened the country:

Safety: For this reason, it is urgent to carry out research from the perspective of standardization to build a safe, convenient, and unified resident identity network authentication technical framework, so as the identity and authentication of residents in the network space provide security guarantees, which will improve my country's network identity management level and realize the modernization of network social governance for technical support:

In order to improve the standardization and security of personal information collection in the process of resident identity network authentication, a unified information collection control needs to be formulated:

This part is specially formulated to standardize the data structure and interface methods of the information collection control:

Resident identity network authentication service Part 3: Information acquisition control interface requirements

1 Scope

This part of GA/T 1723 specifies the data structure, interface method and results of the information acquisition control of the resident identity network authentication system Stopwatch:

This part is applicable to the design and development of the information acquisition control interface of the resident identity network authentication system:

2 Normative references

The following documents are indispensable for the application of this document: For dated reference documents, only the dated version applies to this article Pieces: For undated references, the latest version (including all amendments) applies to this document:

GA/T 1721 General Terms for Resident Identity Network Authentication GA/T 1722 Overall Technical Framework of Resident Identity Network Authentication GA/T 1723.2 Resident Identity Network Authentication Service Part 2: Service Interface Requirements

3 Terms and definitions

The terms and definitions defined in GA/T 1721 apply to this document:

4 General

4.1

Overview

In the overall technical framework of the resident identity network authentication system given by GA/T 1722, the objects of this part of the specification are shown in Figure 1:

"Standard 6" position:
