What this standard covers

This standard specifies test apparatus and test methods for the evaluation of vertical flame propagation, heat release and smoke generation characteristics of vertically installed bundled cables, wires or cables under specified test conditions. This standard is applicable to the assessment of the fire risk of bundled cables, wires and cables.

Document data

International classification (ICS): 13.220.40.

Chinese classification (CCS): C80.

Estimated length of the Chinese original: 33,343 words.

Adopted international standard: prEN 50399-2003, MOD.
