What this standard covers

This Chinese standard specifies the installation on the device isotope instrument classification, shielding devices for radiation protection purposes and the process structure of the instrument and its control method performance requirements and test methods, symbols and signs. This standard applies to the installation on the device isotope instruments. This standard does not apply to the following isotopes, because they are cleverly designed and used from the characteristics of low activity radioactive sources considered without complying with the supply, the use of artificial radionuclides general provisions. This standard does not apply to ion generator (such as smoke detectors, static eliminator, etc.).

Document data

International classification (ICS): 13.280.

Chinese classification (CCS): F81.

Estimated length of the Chinese original: 16,113 words.

Adopted international standard: ISO 7205-1986, MOD.
