Foreword

GB 40248-2026 is a mandatory national standard (GB) of the People's Republic of China, issued on 28 September 2026 by the State Administration for Market Regulation and the Standardization Administration of China, with effect from 1 April 2027.

This edition replaces GB/T 40248-2021.

It is under the responsibility of the National Fire and Rescue Administration.

Classification: ICS 13.220.01; CCS C 80.

1 Scope

This mandatory national standard governs fire safety management of assembly occupancies, meaning places where large numbers of people gather. It is aimed at the owners, operators and fire safety managers of such venues, and at fire inspectors, consultants and insurers who assess how those venues are run. Its contents cover management duties, the organization of fire safety responsibilities, routine patrol and inspection, staff training, upkeep of evacuation routes and fire equipment, control room operation, hazard rectification, hot work, construction activity and emergency plans with drills, together with record keeping.

Because the document carries the GB designation, compliance is compulsory in China. It was issued on 28 September 2026 and takes effect on 1 April 2027. It replaces GB/T 40248-2021, so the earlier recommended text is superseded by a requirement with legal force. Foreign operators of venues in China and their local advisers should review it ahead of the effective date.
