What this standard covers

This standard is applicable to the seismic design of newly built pressurized water reactor nuclear power plants in areas where the peak value of the ultimate safe ground motion acceleration is not greater than 0.5g. The basic principles and seismic calculation methods are also applicable to heavy water reactors, gas-cooled reactors and fast neutron reactors.

Document data

International classification (ICS): 91.120.01.

Chinese classification (CCS): P15.

Estimated length of the Chinese original: 196,164 words.

Supersedes the earlier edition GB 50267-1997.
