Foreword

This standard replaces GB/T 10302-1988 "People's Republic of China railway station name code".

This standard and GB/T 10302-1988 compared to the main changes are as follows.

--- modified the station code coding principle;

--- code for the meaningless code;

The code is sorted in Chinese alphabetical order.

This standard is proposed by the Ministry of Railways of the People's Republic of China.

This standard is owned by the Ministry of Railways Standard Measurement Research Institute.

The drafting of this standard. the Ministry of Railways Information Technology Center, the Ministry of Railways Transport Bureau, the Ministry of Railways Standard Measurement Research Institute.

1 Scope

This standard specifies the national railway station code.

This standard applies to the national railway information management in the railway station information processing business.

2 Terms and definitions

The following terms and definitions apply to this standard.

Railway station railwaystations Refers to the stations and passengers on the national railway line that are put into operation. National railways include national railways and rail transport with national railways of the joint-stock railways, joint railways and local railways.

3 Station code preparation principles

3.1

station code for the decimal digital code, composed of five digits, the code range of 10000 ~ 89999.

3.2

The same on-line station code is as continuous as possible, with the trunk line area, the area station code in the order of the order of operation, Diminished.

3.3

sequence coding, the station code between the reserved three codes, the new line reserved 30 to 500 yards, as the need to increase the station.

3.4

station code is meaningless, each station code is unique and remains unchanged, the station rename the code unchanged, the station closed code storage.
