What this standard covers

This standard specifies the method of accelerated test using mercury nitrate determination of copper and copper alloys in residual stresses. This residual stress may lead to material in use or in storage due to stress corrosion cracking and damage. Although this standard also applies to test assemblies or components, but not for that purpose, when used for this purpose need to make certain changes.

Document data

International classification (ICS): 77.040.30.

Chinese classification (CCS): H13.

Estimated length of the Chinese original: 7,765 words.

Adopted international standard: ISO 196-1978, MOD.

Supersedes the earlier edition GB 10567-1989.
