What this standard covers

This standard specifies the combinations of different sub-systems to measure various properties of satellite communication earth station taken; and gives definitions of terms. The third part of the measurement method applied to measure the transmission characteristics of the transmission frequency division multiplexing telephone, black and white and color television satellite communication earth station. The measuring method is generic and can be used to measure a combination of two or more subsystems. The third part of this standard should be the first part of "a combination of common subsystems and subsystem measurement" so common there.

Document data

International classification (ICS): 33.060.30.

Chinese classification (CCS): M35.

Estimated length of the Chinese original: 3,356 words.

Adopted international standard: IEC 60510-3-1-1981, IDT.
