What this standard covers

This standard specifies the method of how to use a structure not connected with the incentive structure to measure the impact of the exciter admittance and other mechanical frequency response functions. This section is limited to the impact of admittance to obtain accurate measurements using excitation technique.

Document data

International classification (ICS): 17.160.

Chinese classification (CCS): J04.

Estimated length of the Chinese original: 25,269 words.

Adopted international standard: ISO 7626-5-1994, IDT.

Supersedes the earlier edition GB/T 11349.3-1992.
