What this standard covers

This standard specifies the electrical characteristics of unbalanced voltage digital interface circuits. Such an interface circuit is generally integrated to achieve. It can be used for data terminal equipment (DTE) and data circuit-terminating serial binary signals between serial binary signals or digital switching equipment between any point of interconnection equipment (DCE). The Standard and GB 7618 (CCITT recommendations V. 10) and X. 26 recommendations compatible.

Document data

International classification (ICS): 33.040.50.

Chinese classification (CCS): L78.

Estimated length of the Chinese original: 15,191 words.

Adopted international standard: EIA RS423A-1978, MOD.
