

ICS 33.060.20

CCS M 36

**NATIONAL STANDARD OF THE
PEOPLE'S REPUBLIC OF CHINA**

GB/T 12193-2017

**Methods of measurement for receivers employing F3E or G3E
emission used in the mobile services**

(English Translation)

Issued on: December 29, 2017

Implemented on: July 1, 2018

**Issued by: General Administration of Quality Supervision, Inspection and
Quarantine of the People's Republic of China, Standardization
Administration of the People's Republic of China**

Table of Contents

Foreword
1 Scope
2 Normative references
3 Terms and Definitions, Abbreviations
3.1 Terms and Definitions
3.2 Abbreviations
4 Standard Test Condition
4.1 Working Conditions
4.2 Standard conditions for basic power supply
4.3 Standard atmospheric conditions
4.4 Standard day working cycle condition
5 Supplementary test conditions
5.1 Input Signal Source
5.2 Input signal level
5.3 Standard input signal
5.4 Standard Input Signal Level
5.5 Standard input signal frequency
5.6 Standard modulation of the input signal
5.7 Standard Test Modulation
5.8 Convergence Network of Several Signal Sources
5.9 Configuration of Input Signals When Testing Duplex Equipment Receiving Partial Characteristics
5.10 Testing the Input Signal Configuration of a Receiver with a Monolithic Antenna
5.11 Audio Bandwidth Limit
5.12 Squelch Condition
5.13 De-Emerging Condition
5.14 DUT Interface Condition
5.15 Radiation Measurement Condition
5.16 Test Method for Intermodulation Characteristics of Signal Sources
5.17 Signal Source Noise Test Method
6 Requirements for measuring equipment
6.1 Distortion factor meter and audio level meter

6.2	Test Instrument Accuracy Requirements
6.3	Precautions for Use of Coupling Devices in Measurements with a Monolithic Antenna Receiver
7	Sensitivity
7.1	Determination of Available Sensitivity (MUS)
7.2	Specified Usable Sensitivity (SUS)
8	Receives available frequency bandwidth
8.1	Overview
8.2	Measurement Method
9	Audio Response
9.1	Overview
9.2	Measurement Method
9.3	Representation
10	Audio Distortion
10.1	Overview
10.2	Measurement Method
11	Relative audio intermodulation product level
11.1	Overview
11.2	Measurement Method
11.3	Results Representation
12	Squelch characteristics
12.1	Squelch On and Lock Levels
12.2	Squelch On Delay and Block Delay
12.3	Squelch Blocking Threshold
12.4	Squelch Detuning Threshold
13	Signal to residual output power ratio
13.1	Overview
13.2	Measurement Method
13.3	Results Representation
14	Selectivity
14.1	Overview
14.2	Adjacent Channel Selectivity
14.3	Co-Channel Suppression
14.4	Blocking
14.5	Spurious Response Immunity

14.6 Intermodulation immunity
15 Audio Sensitivity
15.1 Overview
15.2 Measurement Method
16 Receive Limiting Features
16.1 Overview
16.2 Measurement Method
16.3 Result Expression
17 Noise Suppression Input Signal Level
17.1 Overview
17.2 Measurement Method
18 Impulse noise
18.1 Impulse Noise Tolerance
18.2 Relationship Between Noise Suppression Input Level and Input Signal Frequency with Impulse Noise
19 Conducted spurious components
19.1 Overview
19.2 Measurement of conducted spurious components at antenna ports
19.3 Measurement of conducted spurious components (frequency below 30 MHz) of the AC power port
20 Receive Characteristics Test in Duplex State
20.1 Overview
20.2 Measurement Method
21 Expander Features
21.1 Expander Total Amplitude Characteristics
21.2 Expander Startup and Recovery Times
22 Receiver output power
22.1 Overview
22.2 Measurement Method
23 Radiated spurious components
23.1 Overview
23.2 Average radiation spurious component
23.3 Maximum Effective Radiative Spurious Component
23.4 RFCD (radio frequency coupled device) radiation spurious components
24 Radiation Sensitivity
24.1 Overview

24.2 Reference radiation sensitivity

24.3 General Radiation Sensitivity

24.4 RFCD Radiation Sensitivity

24.5 Average Radiation Sensitivity

Appendix A (Normative) Guidelines for Use of RF Coupled Devices

Appendix B (Normative) Basic Concept of Impulse Noise and Random Pulse Generator
