What this standard covers

This standard specifies the method for the determination of rubber or plastic coated fabrics breakage or cracking of the lowest temperature of the coating layer does not appear when subjected to the provisions of the impact conditions. Rubber or plastic coated fabrics used in many low-temperature impact or no impact bending articles. Data obtained by this method can only be used to predict these coated fabrics in the method shown in the low-temperature deformation conditions product performance.

Document data

International classification (ICS): 59.080.40.

Chinese classification (CCS): G42.

Estimated length of the Chinese original: 10,149 words.

Adopted international standard: ISO 4646-1989, IDT.

Supersedes the earlier edition GB/T 12584-2001.
