What this standard covers

This standard specifies the method for the determination of volatile liquefied petroleum gas. This standard applies to propane-type, C - mixed butane and butane liquefied petroleum gas. The standard refers to the temperature of the volatile sample is vaporized with 95% (V/V) to indicate when there is a low volatile hydrocarbon compound means that the temperature will rise. The results of this standard can be used to predict the approximate content of various types of liquefied petroleum gas in a high boiling components.

Document data

International classification (ICS): 75.160.30.

Chinese classification (CCS): E46.

Estimated length of the Chinese original: 4,488 words.

Adopted international standard: ASTM D1837-1986, NEQ.
