What this standard covers

This standard specifies the types of adhesive chemical resistance test method. The method uses the adhesive bonding of the metal sample some of the test liquid, under certain provisions of lowering the temperature of soaking time to measure the adhesive strength of the adhesive properties of chemical agents. This standard applies to all types of adhesives.

Document data

International classification (ICS): 83.18.

Chinese classification (CCS): G38.

Estimated length of the Chinese original: 4,417 words.

Adopted international standard: ASTM D896-1984, MOD.
