What this standard covers

This standard specifies the determination of two of the same type with the photometric method of colored pigments relative tinting strength and general test methods relative scattering power of white pigments two of the same type. When this method is not applicable to a particular generic product should require a special method for determining the relative scattering power relative tinting strength of colored pigments and white pigment.

Document data

International classification (ICS): 87.060.10.

Chinese classification (CCS): G53.

Estimated length of the Chinese original: 11,184 words.

Adopted international standard: ISO 787-24-1985, MOD.
