What this standard covers

This Standard specifies the determination of low temperature flexibility of building materials. This Standard is applicable to the determination of solvent-based single-component elastic sealing material at high temperature and low temperature low temperature flexibility after cyclic process. Other types of sealing material may also refer to use.

Document data

International classification (ICS): 91.100.50.

Chinese classification (CCS): Q24.

Estimated length of the Chinese original: 7,782 words.

Adopted international standard: ASTM C711-1993 (1997), MOD.

Supersedes the earlier edition GB/T 13477-1992.
