What this standard covers

This standard specifies the method for the determination of uranium hexafluoride principles and steps of molybdenum. This standard applies to uranium hexafluoride in the determination of molybdenum, the sampling of 1g of uranium when uranium hexafluoride hydrolyzate, measured in the range of 0. 5 ~ 8µg/g uranium. Niobium, tantalum, titanium, tungsten and chromium each 200 µg does not interfere with the determination of molybdenum.

Document data

International classification (ICS): 27.120.30.

Chinese classification (CCS): F46.

Estimated length of the Chinese original: 5,546 words.

Adopted international standard: ASTM C761-1988, MOD.
