What this standard covers

This standard specifies the characteristics of the electro-mechanical vibration and shock measuring inertial sensor (hereinafter referred to as the sensor) should be described. This standard applies to electrical and mechanical vibration and shock measuring inertial sensors. The electrical output of these sensors is the object motion acceleration, velocity or displacement of known function.

Document data

International classification (ICS): 17.16.

Chinese classification (CCS): L15.

Estimated length of the Chinese original: 6,661 words.

Adopted international standard: ISO 8042-1988, NEQ.
