What this standard covers

This standard specifies test methods precious metals and their alloys resistivity, resistance per unit length and quality of the resistivity. This standard applies to a uniform cross-sectional area of the precious metal and its alloy wire, strip measuring resistivity, resistance per unit length and quality of the resistivity. Other metals and alloys can also refer to the use.

Document data

International classification (ICS): 77.040.99.

Chinese classification (CCS): H21.
