What this standard covers

This standard specifies a standard operating system interface and environment to support source-level portability of applications. It is available for application developers and system implementation to use. This standard specifies the external characteristics and application developers care facilities, rather than describing the internal structure technology to achieve these functions used. A focus on those sorts of functions and facilities needed for the commercialization of the application. This standard has been defined in the source level, the goal is to compile strictly follow the POSIX. 1 (which is the standard) the application source code to execute on compliance with this standard is achieved.

Document data

International classification (ICS): 35.08.

Chinese classification (CCS): L74.

Estimated length of the Chinese original: 217,231 words.

Adopted international standard: ISO/IEC 9945-1-1990, IDT.
