What this standard covers

This standard applies to the fiber optic waveguide modulator electro-optic modulator. Such devices are dielectric or semiconductor material of the substrate with a waveguide, under the action of an external electric field can change the amplitude of the light waveguide transmission, phase or polarization and other parameters. This standard specifies a detailed specification of standard optical waveguide electro-optic modulators and quality assessment procedures identified in the approved use, mechanical and environmental testing and measuring methods.

Document data

International classification (ICS): 33.180.30.

Chinese classification (CCS): L51.

Estimated length of the Chinese original: 7,765 words.
