Foreword

GB/T 14363-2026 is a recommended national standard (GB/T) of the People's Republic of China, issued on 28 September 2026 by the State Administration for Market Regulation and the Standardization Administration of China, with effect from 1 January 2027.

This edition replaces GB/T 14363-2009.

It is under the responsibility of the Standardization Administration of China.

Classification: ICS 47.020.20; CCS U44.

1 Scope

This standard provides a method for measuring the lubricating oil consumption of diesel engines. Oil consumption is a performance and durability indicator, linked to engine wear, emissions, and running cost, so a defined method helps different parties obtain comparable results.

Engine manufacturers, lubricant suppliers, test laboratories, vehicle and equipment makers, and quality inspectors are the likely users. It is a recommended national standard (GB/T), so it is voluntary unless required by a contract, customer, or product rule. The 2026 edition replaces GB/T 14363-2009. It was issued on 28 September 2026 and takes effect early, on 1 January 2027, rather than in April. Organizations that cite the 2009 edition in test procedures, development programs, or supply agreements should check which version applies to them. The document is useful for engine development and for comparing products from different suppliers on a common basis.
