foreword

This document is in accordance with the provisions of GB/T 1.1-2020 "Guidelines for Standardization Work Part 1. Structure and Drafting Rules for Standardization Documents" drafting.

This document is part 13 of GB/T 14536. GB/T 14536 has published the following parts.

---GB/T 14536.1-2022 Electric automatic controller Part 1. General requirements;

---GB/T 14536.3-2022 Electric automatic controller Part 3. Special requirements for motor thermal protector;

---GB/T 14536.4-2008 Household and similar electrical automatic controllers special

features for thermal protectors for ballasts for fluorescent lamps

Require;

---GB/T 14536.6-2022 Electric automatic controller Part 6.Special requirements for burner electric automatic control system;

---GB/T 14536.7-2010 Household and similar electric automatic controllers, special requirements for pressure-sensitive electric automatic controllers, including mechanical requirements;

---GB/T 14536.8-2010 Special requirements for household and similar electric automatic controller timers and timing switches;

---GB/T 14536.9-2008 Special requirements for electric water valves of electric automatic controllers for household and similar purposes (including mechanical requirements beg);

---GB/T 14536.10-2022 Electric automatic controllers Part 10.Special requirements for temperature-sensitive controllers;

---GB/T 14536.11-2008 Special requirements for starting relays for motors of household and similar electric automatic controllers;

---GB/T 14536.12-2010 Special requirements for household and similar electric automatic controller energy regulator;

---GB/T 14536.15-2022 Electric automatic controllers Part 15.Special requirements for humidity sensitive controllers;

---GB/T 14536.16-2013 Special requirements for household and similar electric automatic controllers and electric starters;

---GB/T 14536.17-2005 Float-type or electrode-sensitive electric controllers used in household and similar electric automatic controllers and boiler appliances

Special requirements for inductive water level sensitive electric automatic controllers;

---GB/T 14536.18-2006 Electric automatic controllers for household and similar applications Float-type water level controllers for household and similar applications

special requirements;

---GB/T 14536.19-2017 Special requirements for electric gas valves with electric automatic controllers for household and similar purposes, including mechanical

Require;

---GB/T 14536.20-2008 Household and similar electric automatic controller water flow and

air flow sensitive controller special requirements

requirements, including mechanical requirements;

---GB/T 14536.21-2008 Special requirements for household and similar electric automatic controller electric oil valve, including mechanical

Require.

This document replaces GB/T 14536.13-2008 "Special requirements for electric door locks with electric automatic controllers for household and similar purposes", and

Compared with GB/T 14536.13-2008, except for structural adjustment and editorial changes, the main technical changes are as follows.

--- Changed the abnormal operation requirements (see Chapter 28, Chapter 27 of the.2008 edition);

--- Added terms and definitions (see H.3.101.1 and H.3.101.2);

--- Changed the requirements for Class B control functions (see H.28.1.2.2, H.27 of the.2008 edition);

---Changed the requirements for C-type control functions (see H.28.1.2.3, H.27 of the.2008 edition);

--- Changed the requirements for failures that occur during safety shutdown (see H.28.1.2.2.2, H.28.1.2.3.2 and H.28.1.2.3.3,.2008 version of H.27).

This document is equivalent to IEC 60730-2-12:2015 "Electric automatic controllers Part 2-12.Particular requirements for electric door locks".

This document sets 1.1 Scope and 1.2 Normative References in Chapter 1 of the international document as Chapter 1 and Chapter 2 separately, and the following

The chapter number is extended. The chapters and articles of Appendix H, Appendix J, Appendix U, and Appendix V are adjusted accordingly.

The following minimal editorial changes have been made to this document.

--- In order to coordinate with existing standards, change the name of the standard to "Electric automatic controller Part 13.Special requirements for electric door locks".

Please note that some contents of this document may refer to patents. The issuing agency of this document assumes no responsibility for identifying patents.

Introduction

Automation and intelligence are the development goals of all kinds of live equipment, and

the electric automatic controller is the cornerstone of its realization. as an appliance

The core components of the equipment, the inherent safety and functional safety of the electric automatic controller are closely related to the safety of personal and property. GB/T 14536

The series of standards adopt the IEC 60730 series of standards, which regulate the electrical and automatic safety of household and similar electrical appliances and other electrical and non-electrical equipment.

The requirements for control devices can also be extended to industrial applications in the absence of specific product standards, such as central heating, air conditioning, process heating buildings

Yu automation, etc., specifically include the following contents.

--- Electric automatic control device, which operates mechanically, electromechanically, electrically or electronically, responds to or controls conditions such as temperature, pressure, passage of time,

Parameters such as humidity, light, electrostatic effects, flow or level.

--- Electric automatic control devices for starting small electric motors mainly used in household and similar appliances and equipment. this control

The device can be built into the motor or separate from the motor.

--- Non-automatic control devices related to automatic control devices.

The IEC 60730 series of standards have been revised several times, expanding the scope from electric automatic controllers for household and similar purposes to electric automatic controllers.

The GB/T 14536 series is being revised successively in China according to the new version of the IEC standard. The revised GB/T 14536 series is proposed to be

The next part is composed.

---GB/T 14536.1 Electric automatic controller Part 1.General requirements. The purpose is to generally standardize electric automatic controller products

Require.

---GB/T 14536.3 Electric automatic controller Part 3.Special requirements for motor thermal protectors. The purpose is to standardize electric

Machine thermal protector product requirements.

---GB/T 14536.4 Special requirements for household and similar electric automatic controllers, ballast thermal protectors for tubular fluorescent lamps.
